

A diagram showing the layout of the Mouse-Dyad-10M experiment. It features a central black 'X' representing the mouse. Five colored dots (green, blue, orange, pink, and teal) are arranged around the 'X', each connected to it by a short line of the same color, representing the camera positions. The dots are located at approximately (20, 520), (250, 700), (250, 820), (460, 510), and (240, 140) in a 1000x1000 coordinate system.

A diagram showing the layout of the SLAP-2M experiment. It features a central black 'X' representing the mouse. Eight colored dots (green, blue, orange, pink, teal, yellow, grey, and brown) are arranged around the 'X', each connected to it by a short line of the same color, representing the camera positions. The dots are located at approximately (910, 250), (690, 220), (580, 480), (860, 570), (960, 650), (570, 480), (830, 700), and (860, 560) in a 1000x1000 coordinate system.
