

a

Exhaustive hypothesis testing

Maree et al. 2024 · (A!)^C per frame

every grouping triangulated + scored

one kept: lowest reprojection error

Greedy per-view assignment

LUC3D · C Hungarian solves, $O(C \cdot A^3)$

each camera assigned once, then committed

targets updated before the next camera

b

Cost per (target, detection) pair

c

d

e

f

b: the cost function as implemented. c: exact arithmetic. d: measured by scripts/bench/bench_crossview.mjs.

e: 8 BMimica sessions, a fixed 6,000-frame leading window per cell, identical across all 24 cells.

f: exhaustive is our reimplementation of the published per-frame procedure. IDF1 and switches via motmetrics on a shared identity-stripped pool.
